## LED lighting under water lighting

Dosita LEDs are long lasting, energy efficient light sources designed with high intensity lux Diffuser Lens radiates light throughout the entire circumference of the lens. Unlike traditional LED lenses that restrict the light output to unflattering hot spots.

Dosita lights improves the light's luminosity by 50 percent in comparison to others

One of the main advantages of the surface mounted lighting is the flexibility in terms of placement, as they can be placed almost anywhere inside your pool, and will not protrude and therefore won't be knocked about.
